Objective:
As a result of the COVID-19 pandemic has affected millions of individuals around the United States. Because of the serious conditions of the pandemic, it caused the United States to shut down. This shutdown has caused the entirety of the country to go into an economic depression. As this depression increased, many individuals have gotten laid off and now have no jobs. As this might be a primary source of income for these families, they are going to be in deep economic struggles now. These struggles affect their day to day lives and cause these families to be in a difficult situation.

Our Mission is to provide hygiene and personal care items to the families in need in our community. Many individuals have lost their jobs and have no source of income. As the United States opens up again these individuals have to go back into the work force to help support their families. This is where we come in. These individuals will have to go out and about without any protection. This puts them at a high chance of contracting the virus and bringing it back to their loved ones.
